EXCELLENCE VOICES

DEBATE SKILLS SERIES

MODULE 5

DEBATE PRACTICE & COMPETITION PREPARATION

LEARNING GOALS

- Understand all 15 official debate topics.
- Develop arguments for both supporting and opposing positions.
- Use reasons and examples to make arguments convincing.
- Respond respectfully with rebuttals.
- Deliver a clear opening, organised points and a confident conclusion.

Prepared by Rahim Shaikh
Co-founder, Curriculum Director, Excellence

Your voice. Your reasoning. Your responsibility.

UNDERSTANDING MODULE 5

This module prepares students for debate practice and competition. A debate is not simply a speech or a disagreement: speakers must take a clear position, support it with logical reasons, listen to the opposing side and respond to the arguments that are actually presented.

What you will find in this guide

Part 1	All 15 official topics, with a brief guide to the central question.
Part 2	Five supporting and five opposing points for each topic, with explanations in separate boxes.
Part 3	A simple method for building arguments, a speech structure, rebuttal phrases and practice activities.
Part 4	The five recommended competition topics explained in greater depth at the end of the guide.

How to use this module

• **Understand the motion:** Identify the exact question and what each side must prove.

• **Prepare both sides:** Trainers may assign a position, so do not prepare only the side you personally agree with.

• **Choose your strongest points:** Select the clearest and most relevant arguments.

• **Support every claim:** Explain your reason and give a realistic example. Do not invent statistics.

• **Listen before rebutting:** Respond to the other speaker's actual point.

Important for trainers: Assign opposing positions during practice where possible, so students learn to reason from both sides.

PART 1 — ARGUMENT BANK FOR ALL 15 TOPICS

What the topic asks: Consider whether phones support learning and safety or distract students and affect wellbeing.

SUPPORTING / FOR	OPPOSING / AGAINST
Learning access: Educational apps, dictionaries and research tools can support study when used with a clear purpose.	**Distraction:** Notifications and games can interrupt lessons and reduce concentration.
Communication: Students can contact family or teachers when communication is genuinely needed.	**Overdependence:** Students may rely on a phone instead of remembering, solving or researching independently.
Digital skills: Responsible use helps students practise useful digital skills.	**Cyberbullying:** Phones can provide a channel for hurtful messages and online harassment.
Organisation: Calendars, reminders and learning platforms can help students manage tasks.	**Sleep and wellbeing:** Late-night screen use may interfere with sleep and healthy routines.
Emergency contact: A phone can help a student reach a trusted adult in an emergency.	**Unequal access:** Not every student has the same device, data plan or safe access.

2. Social Media: A Blessing or a Curse?

What the topic asks: Weigh connection and learning against risks involving privacy, time, misinformation and online behaviour.

SUPPORTING / FOR	OPPOSING / AGAINST
Connection: Students can maintain friendships and communicate with people who live far away.	**Time loss:** Endless scrolling can take time away from study, sleep and face-to-face activities.
Learning communities: Educational pages and groups can share explanations, ideas and opportunities.	**Cyberbullying:** Negative comments and public humiliation can harm students.
Creativity: Young people can showcase art, writing, projects and other talents.	**Privacy risks:** Personal photos, locations or details may be shared beyond the intended audience.
Awareness: Social platforms can spread useful information about events and social issues.	**Misinformation:** False claims can spread quickly when users share posts without checking them.
Peer support: Well-managed communities can help people feel less alone and exchange advice.	**Unhealthy comparison:** Highly edited posts can create unrealistic expectations about appearance or success.

3. Homework: Necessary for Learning or an Unnecessary Burden?

What the topic asks: Ask whether homework reinforces learning without creating an unreasonable workload.

SUPPORTING / FOR	OPPOSING / AGAINST
Practice: Independent exercises help students strengthen skills introduced in class.	**Stress:** Too much homework can create pressure and reduce time to rest.
Responsibility: Completing tasks can build planning and time-management habits.	**Unequal support:** Students may have different access to quiet spaces, devices or adult help.
Knowledge gaps: Homework can show students and teachers which topics need more attention.	**Reduced family time:** Heavy workloads can limit time for family, hobbies and social development.
Independent learning: Students practise applying ideas without immediate teacher assistance.	**Quality over quantity:** Long repetitive tasks may add little learning compared with focused practice.
Preparation: Short preparatory tasks can help students arrive ready for the next lesson.	**Health and balance:** Children need sleep, exercise and recreation as well as academic work.

4. Exams: The Best Way to Measure Intelligence?

What the topic asks: Consider what examinations measure well and which abilities may require other forms of assessment.

SUPPORTING / FOR	OPPOSING / AGAINST
Clear standards: Common tests can assess whether students understand specified material.	**Limited snapshot:** One exam may not represent a student's full understanding or ability.
Comparable results: Consistent exams can help schools compare performance against shared criteria.	**Different strengths:** Creativity, teamwork, speaking and practical skills may not appear in written tests.
Individual accountability: Exams show what a student can produce independently under set conditions.	**Pressure:** High-stakes exams can cause anxiety that affects performance.
Preparation habits: Revision can encourage organisation, recall and sustained effort.	**Memorisation risk:** Some assessments reward remembering information more than applying it.
Progress tracking: Results can help identify topics where further teaching or practice is needed.	**Unequal circumstances:** Illness, disability or difficult conditions may affect a student's result.

5. Artificial Intelligence: Helpful or Risky for Students?

What the topic asks: AI can offer explanations and practice, but students must consider accuracy, originality, privacy and independent thinking.

SUPPORTING / FOR	OPPOSING / AGAINST
Extra explanations: Students can ask for a difficult idea to be explained in different ways.	**Incorrect answers:** AI may present inaccurate information confidently, so claims need checking.
Practice materials: AI can help generate quizzes, examples and revision prompts.	**Dependence:** Copying answers can prevent students from practising essential skills.
Learning support: Some tools can adapt explanations or support access to information.	**Originality:** Submitting generated work as one's own may violate school rules and learning goals.
Idea exploration: AI can suggest approaches that students then evaluate and improve.	**Privacy:** Students should not enter sensitive personal or school information into unknown tools.
Immediate feedback: When checked carefully, feedback can help students notice gaps in their work.	**Bias and judgement:** AI may miss context or reflect bias, so human judgement remains important.

6. School Uniforms: Should They Be Compulsory?

What the topic asks: Balance school identity and reduced clothing pressure against comfort, cost and individual expression.

SUPPORTING / FOR	OPPOSING / AGAINST
Shared identity: Uniforms can create a visible sense of belonging to the school community.	**Self-expression:** Clothing can be one way young people express identity and personality.
Less clothing pressure: A common dress code may reduce competition over fashionable clothes.	**Cost:** Specific uniforms may be expensive, especially when several sets are required.
Routine: Uniforms can simplify the daily decision about what to wear.	**Comfort and climate:** A uniform may not suit every student's comfort, body or local weather.
School identification: Uniforms can make students easier to recognise during school activities.	**Practical needs:** Different activities may require clothing that is safer or more comfortable.
Focus on learning: Supporters argue that common clothing can reduce some appearance-based distractions.	**Rules do not solve everything:** Respect and discipline also depend on relationships and school culture.

7. Online Learning vs Classroom Learning: Which Is Better?

What the topic asks: Compare flexibility and digital access with in-person interaction, structure and immediate support.

SUPPORTING / FOR	OPPOSING / AGAINST
Flexibility: Online lessons can allow students to learn from different locations and sometimes at different times.	**Direct interaction:** Classrooms allow students to ask questions and receive immediate personal feedback.
Digital resources: Videos, simulations and interactive tools can make some concepts easier to explore.	**Distractions:** Home environments may include noise, chores or competing screen activities.
Travel saved: Remote learning can reduce travel time and improve access for some learners.	**Digital inequality:** Reliable devices, internet access and quiet space are not universal.
Self-paced review: Recorded material may allow students to revisit difficult sections.	**Social development:** In-person learning offers daily practice in teamwork and communication.
Wider access: Online courses can connect learners with resources not available locally.	**Motivation and routine:** Some learners benefit from a structured timetable and teacher supervision.

8. Sports vs Studies: Which Should Students Prioritise?

What the topic asks: Avoid assuming the two must compete; explain how priorities may change with goals, health and circumstances.

SUPPORTING / FOR	OPPOSING / AGAINST
Health: Sports support physical fitness and can help students manage stress.	**Academic foundations:** Core subjects may be needed for further study and many career pathways.
Life skills: Games can develop teamwork, discipline, resilience and fair play.	**Limited time:** Training and competitions can reduce time available for assignments and revision.
Learning readiness: Exercise and breaks may help students return to study with better focus.	**Injury risk:** Some sports involve injuries that can interrupt participation or study.
Talent and careers: For some students, sporting ability can become an important pathway.	**Long-term options:** Strong academic skills can preserve a wider range of future choices.
Balanced development: Education includes physical, social and emotional development as well as academics.	**Exam deadlines:** During important assessment periods, students may need to adjust their schedule.

9. Reading Books vs Watching Educational Videos

What the topic asks: Compare deep reading and imagination with visual demonstration and the ability to replay explanations.

SUPPORTING / FOR	OPPOSING / AGAINST
Vocabulary and focus: Reading exposes students to varied language and sustained attention.	**Visual explanation:** Videos can demonstrate processes that are difficult to picture from text alone.
Imagination: Readers build mental pictures and interpret ideas actively.	**Sound and movement:** Animations and narration may clarify complex or practical concepts.
Independent pace: Students can pause, reread and annotate a difficult passage.	**Accessibility:** Captions, audio and visual examples can support different learning needs.
Detailed information: Books can present extended explanations and carefully organised arguments.	**Engagement:** A well-designed video can quickly introduce an unfamiliar topic.
Reduced screen dependence: Printed reading can provide a break from digital screens.	**Repeatable demonstrations:** Students can replay a step-by-step explanation when practising a skill.

10. Should Students Have a Say in School Rules?

What the topic asks: The question is whether students should contribute to rules while adults retain responsibility for safety and school operations.

SUPPORTING / FOR	OPPOSING / AGAINST
Fairness: Students can explain how rules affect their daily school experience.	**Safety:** School authorities remain responsible for student welfare and safeguarding.
Responsibility: Participation may encourage students to respect rules they helped shape.	**Experience:** Teachers and management may understand legal and operational requirements better.
Communication: Discussion teaches students to express opinions respectfully.	**Consistency:** Common rules can help maintain order across classes and activities.
Practical solutions: Student feedback may reveal problems adults have not noticed.	**Practicality:** Not every decision can be made through lengthy consultation.
Civic learning: Consultation gives students practice in shared decision-making.	**Conflicting interests:** Students may disagree, so a clear decision-making process is still needed.

11. Competition vs Cooperation: What Helps People Succeed?

What the topic asks: Competition can motivate individual improvement; cooperation combines strengths to achieve shared goals.

SUPPORTING / FOR	OPPOSING / AGAINST
Motivation: A clear challenge can encourage people to make greater effort.	**Shared knowledge:** People can learn from one another and exchange different approaches.
Personal improvement: Comparing performance can reveal strengths and areas to develop.	**Teamwork:** Different strengths can contribute to a common goal.
Resilience: Competition can teach people to manage setbacks and continue trying.	**Mutual support:** Teammates can help one another overcome difficulties.
Recognition: Competitions can celebrate achievement and make progress visible.	**Collective solutions:** Complex problems often require coordination rather than individual effort.
Goal setting: A target or opponent can help participants measure improvement.	**Healthy relationships:** Cooperation can build trust and reduce unnecessary rivalry.

12. Communication Skills vs Academic Marks: Which Matters More?

What the topic asks: Compare measurable academic achievement with the ability to explain ideas, listen, collaborate and respond.

SUPPORTING / FOR	OPPOSING / AGAINST
Career readiness: Interviews and workplace situations often require clear answers and confident communication.	**Subject knowledge:** Academic study builds the knowledge needed for many professions and decisions.
Teamwork: People need to explain ideas, listen and cooperate to complete shared tasks.	**Admissions and eligibility:** Marks may be required for entry to courses, scholarships or examinations.
Leadership: Leaders must communicate expectations and resolve disagreements.	**Measurable performance:** Scores offer one way to assess learning against defined criteria.
Everyday life: Communication helps people express needs and understand others.	**Study discipline:** Preparing for assessments can encourage revision and organised learning.
Showing knowledge: Students often need to present or explain what they know, not only write answers.	**Communication needs knowledge:** Speaking confidently cannot replace understanding the subject being discussed.

13. Is Failure More Valuable Than Success?

What the topic asks: Failure may reveal mistakes, while success can build confidence and show which strategies work; neither guarantees learning on its own.

SUPPORTING / FOR

Learning from mistakes: Failure can reveal weaknesses that need attention.

Resilience: Recovering from setbacks can teach patience and persistence.

Problem-solving: Students may need to review and change their methods after a setback.

Self-awareness: Mistakes can help people recognise limitations and seek support.

Humility: Failure may remind people to prepare carefully and remain open to feedback.

OPPOSING / AGAINST

Evidence of progress: Success can show that a strategy or skill is working.

Confidence: Achievement can encourage people to attempt new challenges.

Motivation: Positive results can sustain effort and commitment.

Effective habits: Success can reveal which methods deserve to be repeated.

Real-world outcomes: Some opportunities depend on achieving a required result, not only learning from mistakes.

14. Should Young People Have More Responsibilities at Home?

What the topic asks: Consider age-appropriate chores and independence alongside schoolwork, rest and fair sharing of family duties.

SUPPORTING / FOR

Life skills: Chores can teach cooking, cleaning, organisation and practical independence.

Responsibility: Regular tasks help young people understand commitments and consequences.

Teamwork at home: Sharing work can reduce pressure on one family member.

Confidence: Completing useful tasks can help young people feel capable.

Preparation for adulthood: Home responsibilities provide practice for living independently later.

OPPOSING / AGAINST

Study time: Excessive duties can interfere with homework, revision and school activities.

Need for rest: Young people require sleep, recreation and time to recover.

Fairness: Responsibilities should reflect age, ability and each family's circumstances.

Unequal burden: Some children may be expected to do too much compared with siblings.

Safety: Tasks should be appropriate to the young person's age and skills.

15. A Life Without Smartphones: Better or Worse?

What the topic asks: Explore whether fewer smartphone distractions improve daily life or whether people lose useful tools for safety, learning and connection.

SUPPORTING / FOR

Better concentration: Fewer notifications can make it easier to focus on conversations or tasks.

Sleep routines: Less late-night scrolling may support healthier bedtime habits.

Face-to-face connection: People may spend more time talking directly with friends and family.

Less comparison: Reduced social media use may lower pressure to compare lives and appearances.

Independent activities: People may choose reading, sport or hobbies instead of screen time.

OPPOSING / AGAINST

Communication: Smartphones make it easier to contact family, friends and trusted adults.

Safety: Phones can help people seek assistance or share their location when appropriate.

Learning tools: Dictionaries, educational resources and accessibility features can be useful.

Navigation and services: Maps, transport information and essential services may depend on phones.

Connection at a distance: Video calls and messages help people maintain relationships across distances.

PART 2 — BUILDING STRONG ARGUMENTS

R — REASON	Explain why the point makes sense.
E — EXAMPLE	Give a realistic, relevant example that supports your point.

COMPETITION SPEECH BLUEPRINT

Opening	Greet the audience, name the motion and state your position.
Argument 1	Give a clear claim, reason and example.
Argument 2	Present a different point and explain its impact.
Rebuttal	Address an important argument from the opposing side.
Conclusion	Summarise your strongest reasons and finish confidently.

USEFUL REBUTTAL PHRASES

- “I understand that concern; however, it does not consider…”
- “The opposing side makes a fair point, but our argument shows…”
- “That may be true in some situations. The question is whether…”
- “The example supports the idea that…”

PRACTICE CHALLENGE

Choose one topic, prepare a one-minute argument for each side, then ask a partner to challenge your strongest point. Reply respectfully and stay focused on the motion.

PART 3 — THE FIVE RECOMMENDED TOPICS

RECOMMENDED TOPIC 1: Should Students Have a Say in School Rules?

Understand the motion: The question is whether students should contribute to rules while adults retain responsibility for safety and school operations.

SUPPORTING / FOR	OPPOSING / AGAINST
Fairness: Students can explain how rules affect their daily school experience.	**Safety:** School authorities remain responsible for student welfare and safeguarding.
Responsibility: Participation may encourage students to respect rules they helped shape.	**Experience:** Teachers and management may understand legal and operational requirements better.
Communication: Discussion teaches students to express opinions respectfully.	**Consistency:** Common rules can help maintain order across classes and activities.
Practical solutions: Student feedback may reveal problems adults have not noticed.	**Practicality:** Not every decision can be made through lengthy consultation.
Civic learning: Consultation gives students practice in shared decision-making.	**Conflicting interests:** Students may disagree, so a clear decision-making process is still needed.

Possible rebuttals

Opposing argument	Possible response
Students are too young to influence rules.	Students need not make every final decision; they can give useful feedback while adults retain responsibility.
Teachers already know what is best.	Teachers have valuable experience, and student experiences can add information adults may not see.
Student suggestions could weaken discipline.	A structured process can consider suggestions while keeping safety and reasonable boundaries.

Sample opening statement

> *"Respected judges, teachers and fellow participants, I believe students should have a say in school rules because they experience those rules every day. Listening to students can help schools identify practical improvements. This does not mean students should control every decision; safety, fairness and adult responsibility must remain central."*

Practice questions: Which school rules should students help review? What should happen if a student suggestion conflicts with safety?

Preparation task: Write one C–R–E argument for each side, then deliver a 60–90 second speech in your own words.

RECOMMENDED TOPIC 2: Communication Skills vs Academic Marks: Which Matters More?

Understand the motion: Compare measurable academic achievement with the ability to explain ideas, listen, collaborate and respond.

SUPPORTING / FOR

Career readiness: Interviews and workplace situations often require clear answers and confident communication.

Teamwork: People need to explain ideas, listen and cooperate to complete shared tasks.

Leadership: Leaders must communicate expectations and resolve disagreements.

Everyday life: Communication helps people express needs and understand others.

Showing knowledge: Students often need to present or explain what they know, not only write answers.

OPPOSING / AGAINST

Subject knowledge: Academic study builds the knowledge needed for many professions and decisions.

Admissions and eligibility: Marks may be required for entry to courses, scholarships or examinations.

Measurable performance: Scores offer one way to assess learning against defined criteria.

Study discipline: Preparing for assessments can encourage revision and organised learning.

Communication needs knowledge: Speaking confidently cannot replace understanding the subject being discussed.

Possible rebuttals

Opposing argument	Possible response
Academic marks are the only fair measure.	Marks show some learning, but communication is needed to explain knowledge, collaborate and respond in real situations.
Good communication cannot replace qualifications.	That is true; communication complements academic knowledge rather than replacing it.
Some jobs require little speaking.	Communication also includes listening, writing clearly and understanding instructions, not only public speaking.

Sample opening statement

"Respected judges and fellow participants, I believe communication skills deserve serious attention because success involves more than answering examination questions. Students need to explain ideas, listen carefully, work with others and respond to challenges. Academic knowledge remains essential, but communication helps people use and share that knowledge effectively."

Practice questions: Can a student have excellent marks but struggle to explain ideas? Can confidence replace subject knowledge?

Preparation task: Write one C–R–E argument for each side, then deliver a 60–90 second speech in your own words.

RECOMMENDED TOPIC 3: Artificial Intelligence: Helpful or Risky for Students?

Understand the motion: AI can offer explanations and practice, but students must consider accuracy, originality, privacy and independent thinking.

SUPPORTING / FOR

Extra explanations: Students can ask for a difficult idea to be explained in different ways.

Practice materials: AI can help generate quizzes, examples and revision prompts.

Learning support: Some tools can adapt explanations or support access to information.

Idea exploration: AI can suggest approaches that students then evaluate and improve.

Immediate feedback: When checked carefully, feedback can help students notice gaps in their work.

OPPOSING / AGAINST

Incorrect answers: AI may present inaccurate information confidently, so claims need checking.

Dependence: Copying answers can prevent students from practising essential skills.

Originality: Submitting generated work as one's own may violate school rules and learning goals.

Privacy: Students should not enter sensitive personal or school information into unknown tools.

Bias and judgement: AI may miss context or reflect bias, so human judgement remains important.

Possible rebuttals

Opposing argument	Possible response
AI gives quick and useful answers.	Speed is helpful only when answers are accurate and the student understands them.
Students can simply avoid AI.	Teaching responsible use may be more practical than ignoring a tool students may encounter.
AI makes students lazy.	Misuse can create dependence, but guided use can support practice; the key issue is how it is used.

Sample opening statement

> *"Respected judges and fellow participants, artificial intelligence can be helpful when students use it responsibly. It can offer explanations and practice, but it can also provide incorrect answers or encourage copying. The important question is not simply whether AI is good or bad, but whether students use it critically, honestly and safely."*

Practice questions: How should a student check an AI answer? When does assistance become copying?

Preparation task: Write one C–R–E argument for each side, then deliver a 60–90 second speech in your own words.

RECOMMENDED TOPIC 4: Competition vs Cooperation: What Helps People Succeed?

Understand the motion: Competition can motivate individual improvement; cooperation combines strengths to achieve shared goals.

SUPPORTING / FOR

Motivation: A clear challenge can encourage people to make greater effort.

Personal improvement: Comparing performance can reveal strengths and areas to develop.

Resilience: Competition can teach people to manage setbacks and continue trying.

Recognition: Competitions can celebrate achievement and make progress visible.

Goal setting: A target or opponent can help participants measure improvement.

OPPOSING / AGAINST

Shared knowledge: People can learn from one another and exchange different approaches.

Teamwork: Different strengths can contribute to a common goal.

Mutual support: Teammates can help one another overcome difficulties.

Collective solutions: Complex problems often require coordination rather than individual effort.

Healthy relationships: Cooperation can build trust and reduce unnecessary rivalry.

Possible rebuttals

Opposing argument	Possible response
Competition motivates people.	It can motivate individuals, while cooperation can create effort through shared goals and responsibility.
Cooperation makes people dependent.	Effective teamwork still requires each person to contribute and take responsibility.
Competition creates winners and losers.	Competition can reveal strengths, but results are most valuable when participants also learn from one another.

Sample opening statement

"Respected judges and fellow participants, cooperation allows people with different strengths to work towards a shared goal. Competition can encourage effort, but success often depends on sharing knowledge, supporting teammates and solving problems together. We should consider which approach best serves the goal and whether both can work together."

Practice questions: Can a person compete fairly and still help others? Which approach works best for a group project?

Preparation task: Write one C–R–E argument for each side, then deliver a 60–90 second speech in your own words.

RECOMMENDED TOPIC 5: Is Failure More Valuable Than Success?

Understand the motion: Failure may reveal mistakes, while success can build confidence and show which strategies work; neither guarantees learning on its own.

SUPPORTING / FOR

Learning from mistakes: Failure can reveal weaknesses that need attention.

Resilience: Recovering from setbacks can teach patience and persistence.

Problem-solving: Students may need to review and change their methods after a setback.

Self-awareness: Mistakes can help people recognise limitations and seek support.

Humility: Failure may remind people to prepare carefully and remain open to feedback.

OPPOSING / AGAINST

Evidence of progress: Success can show that a strategy or skill is working.

Confidence: Achievement can encourage people to attempt new challenges.

Motivation: Positive results can sustain effort and commitment.

Effective habits: Success can reveal which methods deserve to be repeated.

Real-world outcomes: Some opportunities depend on achieving a required result, not only learning from mistakes.

Possible rebuttals

Opposing argument	Possible response
Failure teaches lessons, so it is always better.	Failure can teach when people reflect and change; repeated mistakes without learning are not automatically valuable.
Success builds confidence.	Success can build confidence and show that a method works; that is an important form of learning too.
People learn more from mistakes.	Sometimes they do, but success can also reveal effective habits that deserve to be repeated.

Sample opening statement

> *"Respected judges and fellow participants, failure can be valuable because it reveals mistakes and encourages reflection. However, failure is useful only when people learn and adjust their approach. Success also matters because it builds confidence and shows which strategies work. We should compare what each experience teaches rather than assume one is always better."*

Practice questions: Does every failure lead to learning? What can success teach that failure may not?

Preparation task: Write one C–R–E argument for each side, then deliver a 60–90 second speech in your own words.

FINAL COMPETITION CHECKLIST

- ■ I understand all 15 official topics.
- ■ I can explain both sides of each topic.
- ■ I can build arguments using Claim–Reason–Example.
- ■ I can provide relevant examples without inventing facts.
- ■ I can listen carefully and respond to the opposing point.
- ■ I can deliver a clear opening, two arguments and a conclusion.
- ■ I can disagree respectfully and stay within the time limit.

FINAL MESSAGE TO STUDENTS

YOUR VOICE. YOUR REASONING. YOUR RESPONSIBILITY.
A successful debater understands the issue, supports claims with reasons and examples, listens carefully and responds thoughtfully. Prepare both sides, respect your opponents and speak with confidence.
